vendingMachine.java Category.java

```java
import java.util.Scanner;

class Product{
    private String name;
    private double price;
    private String nutritionalFacts;
    private Category category;

    public Product(String name, double price, String nutritionalFacts, Category category) {
        this.name = name;
        this.price = price;
        this.nutritionalFacts = nutritionalFacts;
        this.category = category;
    }

    public String getName() {
        return name;
    }

    public double getPrice() {
        return price;
    }

```
